SUMMARY

Senior UX designer working in UX and UI since 2018, focused on enterprise software, B2B portals and data-heavy tools for government, legal and banking. Recent work includes a case management system live in District Attorney offices across all 72 Wisconsin counties and a school finance portal for the State of Missouri.

Usually the only designer on the team, I handle research, information architecture, prototyping, usability testing, design systems and developer handoff, and I review builds with developers. I started as a front-end developer, design to WCAG 2.1 AA, and use Claude, Claude Code and Figma Make to sort research notes and build prototypes faster.

EXPERIENCE

Senior UI/UX Designer Jan 2026 – Jul 2026

State of Missouri, DESE School Finance Portal | Remote

- Only designer on a six-month RFP proposal to rebuild the portal Missouri's Department of Elementary and Secondary Education uses to calculate and track school payments: 10+ pages for state staff, school districts and the public.
- Interviewed state officials, technical staff with about 20 years on the system, the business analyst and the data team. Used Claude to group notes into themes, then checked each theme against the original notes.
- Ran a heuristic evaluation of the old portal against Nielsen's 10 heuristics and found problems under 7 of them.
- Replaced link-only navigation with role-based information architecture. District users see four menu items, not the full list.
- Designed dashboards, data tables and financial workflows, including Payment Transmittal, LEA Payment Calculations and Appropriation. The dashboard leads with four key numbers, calculation status and upcoming tasks.
- Designed forms to prevent data entry errors: district pre-filled and locked for district users, calculated values read-only beside their inputs, and expected formats shown in fields.
- Wrote the design document first, then built a design system from it: color tokens, 18 components and a layout shell, with a Role property so one component set covers all three roles. Used Claude Code to build matching React, TypeScript and Tailwind components, and reviewed all AI output against the design document and accessibility rules.
- Ran workshops and prototype reviews with stakeholders, using Figma Make and Claude Design for clickable prototypes. Handed off in June 2026 with Figma Dev Mode, the design document, the React components and developer walkthroughs.

Senior Web Designer Jan 2024 – Jun 2025

State of Wisconsin, PROTECT Case Management System | Remote

- Only designer for 18 months on PROTECT, the legal case management system used by District Attorney offices in all 72 Wisconsin counties. Moved 300+ older Windows-based screens into one consistent web and desktop experience.
- Designed three web tools that are now live, each tested in QA with business analysts: XCQ inter-county search (rebuilt from a 2005 tool), eFiling and Administration.
- Added a details pane to the Windows app that follows the selected row, so staff stop switching tabs for each case.
- Learned legal workflows with limited access to end users through requirement sessions, live tool walkthroughs, logged user feedback and usability sessions with analysts who support DA offices.
- Turned that research into design changes: surname-first results with inline aliases, last-synced status in headers and footers, named counties when a sync fails, and compact tables as the default.
- Built the web design system from IBM Carbon with light and dark themes, and extended its data table for legal search. Used Microsoft Fluent UI for desktop, designed around the Telerik and ComponentOne components developers used.
- Designed to WCAG 2.1 AA, checked designs with WAVE, improved readability for older users, and included keyboard order and screen-reader notes in developer specs.
- Ran workshops and bi-weekly design reviews, kept a decision log of approvals, and mentored teammates on UX and Figma.
- Reviewed builds with developers and guided them on HTML, CSS and Angular so the shipped product matched the design. Also designed the PROTECT logo and brand.

Senior UI/UX Designer
Oct 2022 – Apr 2023

Wipro Digital, Client: HP Managed Print Services

- Designed enhancements for Managed Print Central, a live B2B platform: PMPS for sales and CMPS for running contracts.
- Interviewed sales reps, contract managers and their managers, and built a requirements matrix tying each need to a feature.
- Simplified workflows with product and engineering teams, including a six-field proposal form and the Onboarding handoff.
- Built clickable Axure RP prototypes for each enhancement. Each was tested in QA before release into the live application.
- Created reusable Figma components aligned with HP's Veneer design system and checked against the coded components.

UI/UX Designer
Nov 2021 – Jul 2022

Synechron Technologies, Client: Citibank (CitiSpotlight)

- Designed dashboards, user flows, wireframes and UI for an internal banking tool showing each module's status and owner.
- Mapped questions employees asked in email and chat to data and user roles, which became the information architecture.
- Designed light and dark themes within the Citi Design System, with specs for empty, loading and error states.
- Worked with business analysts, developers and compliance teams, following Citibank's accessibility standards.
- Built key layouts and form validations in HTML, CSS, Bootstrap, JavaScript and jQuery before engineering started.

UI Developer
Nov 2018 – Jul 2021

Atos Syntel, Client: FedEx Office

- Built responsive pages in Angular and Bootstrap on AEM with FedEx's 1DX, then moved into research and wireframing.
- Worked with the team on print product pages: survey analysis, competitor and heuristic reviews, two usability test rounds.
- Helped design product cards with a "starting at" price and an inline type guide, both approved for development.
- Designed screens for a mobile label-creation flow on iOS and Android.

PROJECTS

Pantri, Self-Initiated Grocery App Concept
2026

Case study: shivani2627.github.io/pantri.html | Published on Figma Community

- Solo concept from informal conversations with home cooks: grouped what I heard into themes, scoped an MVP, and designed 5 core screens and a substitution concept. The usability test plan is written, and testing is the next step.
- Built a Figma system with 80 variables and 20+ components, Smart Animate prototypes and a WCAG AA contrast audit.
- Tried Config 2026 releases (shaders, code layers, 3D transforms, Weave) and used Claude through Figma's MCP server.

SKILLS

Domains: Enterprise software, B2B portals, B2B SaaS, B2C web, government, legal, banking

Research: User research, user and stakeholder interviews, usability testing, heuristic evaluation, workflow analysis, survey analysis, competitor review, card sorting, user journeys

Design: Information architecture, user flows, wireframing, prototyping, interaction design, responsive design, dashboards, data tables, UX documentation, design specs, developer handoff

Design systems: IBM Carbon, Microsoft Fluent UI, Atlassian, Citi Design System, HP Veneer, FedEx 1DX, design tokens, component libraries, Figma variables, component properties, auto layout

Design tools: Figma (Dev Mode, Smart Animate, Motion), FigJam, Axure RP, Sketch, Adobe XD, InVision, Framer, Balsamiq, Maze, Photoshop, Illustrator

AI tools: Claude, Claude Code, Claude Design, Figma Make, Figma MCP

Accessibility: WCAG 2.1 AA, WAVE, contrast audits

Front end: HTML, CSS, JavaScript, React, Angular, Bootstrap, jQuery

Collaboration: Cross-functional teams, design reviews, workshops, mentoring, Jira, Azure Boards, Confluence, Agile/Scrum

CERTIFICATIONS

Google AI Fundamentals, Google, Aug 2026

Generative AI for UI/UX Design, IBM, Oct 2026

WCAG Compliance, Coursera, Oct 2026

Google AI Professional Certificate, Google, In progress

EDUCATION

Bachelor of Engineering, Information Technology

Yeshwantrao Chavhan College of Engineering

2014 – 2018
